PROFILE

IT student at Greenwich Vietnam. **Six projects delivered**: I build the interface in React and Tailwind, straight in the browser, and ship it myself. My strength is the **interface** — layout, type, user flow, responsive; I write the server side too (Node.js, MongoDB, Firebase), so what I design gets built. **Seeking a Product/UI/UX Design internship**.

SKILLS

Interface design

- Layout
- Visual hierarchy
- Type rhythm
- Colour tokens
- Responsive
- Dark mode
- Multilingual

Built in the browser with React and Tailwind, tuned on the running build — no Figma.

Engineering

- React
- Next.js
- TypeScript
- React Native
- Node.js
- MongoDB
- Firebase
- Tailwind
- PWA
- Git

Both ends: interface and server, plus a mobile app (React Native, Java).

Operations

- Deployment
- Log reading & incident response
- Performance
- Technical SEO
- Code review

Run in production by me: domains, deploys, monitoring, incident response.

Foundation: Python, Express, WebSocket, SQLite · deployed on Vercel, Render, Cloudflare, Netflix.

LANGUAGES

English **VSTEP B2**
Level 4, 2024 · reads technical documentation.

PROJECTS

Hugo Studio — An ecosystem of digital tools

04/2026 – now

Personal project · Design & full-stack development · Operations · hugowishpax.studio

- Built the **shared frame** the system rests on: one identity layer, one points wallet, one real-time notification channel, one interface shell — a new app is content poured in, not another foundation dug.
- Runs as an **installable PWA**, operated by me: traced a provider quota overrun to a loop calling an API every 10 seconds, moved it to 5 minutes, then split the architecture along how each platform bills.

Chanh Toa My Tho — Parish information portal

08/2026 – now

Real users · Design & full-stack development · Demo · chanhtoa.tnttgiaophanmytho.online · Source · github.com/HuynhDutruong/FAQ

- Next.js, React, TypeScript, Tailwind, Node.js, Firestore. **Mass times across 27 dioceses** found by location, the full Bible, a faith Q&A — server-rendered so search engines can read it.
- Wired straight into the parish **Facebook page** through the Graph API: post once and it appears in both places; the access key stays on the server, guarded by Firestore rules.

M-Hike — Hiking app for iOS & Android

06–09/2026

Mobile development coursework · Design & full-stack development · Demo · hiking.hugowishpax.studio · Source · github.com/Hugo-huy2004/Hiking_App

- Built **twice**: React Native on Expo with TypeScript, and a native Android build in Java — to compare the two approaches properly rather than pick one on faith.
- Works with no signal**: SQLite on the device is the primary store, Firebase syncs in the background. GPS journeys replayed in phases, field notes bound to each hike, an SOS screen with coordinates and Morse flashing.

HWJ — Fine jewellery platform

01–04/2026

Personal project · Design & full-stack development · Demo · hwj-demo.hugowishpax.studio · Source · github.com/Hugo-huy2004/HWJ_demo

- React, Tailwind, Node.js, MongoDB, Cloudinary, Google OAuth. **Priced against the market**: live gold and silver rates from an API, shown as a sell and buyback table per mace.
- A **publication** design language for luxury: not one “buy now” button, replaced by an invitation to book an acquisition consultation — restraint suits a purchase considered for months.

Minh Oi Media — Wedding studio website

03–04/2026

Real client · Design & full-stack development · Demo · minhoimedia.digital · Source · github.com/Hugo-huy2004/job_01_MinhOi_Media_studio

- Worked directly with the client from first conversation to handover. Put **five packages and their prices right on the path** instead of forcing an enquiry — couples compare three studios at once.
- Plain HTML, CSS and JavaScript, no framework: light, fast on 4G, and the studio edits the words in the file without calling anyone.

L3GO Coffee — Café website

2026

With Jason Phan · UI/UX design · legocoffee.hwagfu.dev

- Owned the **UI/UX**: colour system, typographic rhythm, the menu flow and how the room is cropped; data and deployment were my partner's.
- Sixty-eight items **filtered by mood** rather than by category: need to wake up, want to settle down, staying a while with friends — faster than reading a long table.

EDUCATION & ACTIVITIES

Greenwich Vietnam 2022–2027

Information Technology · University of Greenwich (UK) with FPT University · graduating 10/2027. Classification mark

68.5/100 — 2:1 (Upper Second-Class), ≈ 3.7/4.0.

Youth group leader – Catechist (level 2)

Children's activities, public speaking, group management.
